Staff Software Engineer with 10+ years of experience building web applications, developer tools, internal platforms, and research systems. My work sits at the intersection of engineering, learning, and human capability, with a focus on building technology that helps people learn and become more capable.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, SQL

Frameworks: React, Next.js, FastAPI, Django, Express

Infrastructure: AWS (Lambda, ECS, S3, Step Functions, EC2), Docker, PostgreSQL, Redis, MongoDB

AI & ML: LLM-assisted development workflows, ML-powered content classification systems, AI coursework (OMSCS)

Work Experience

Software Engineer • Rocket Money • Remote

July 2026 – Present

Shipped React Native fixes for budgeting features used by over 5 million users across iOS, Android, and web

Staff Software Engineer • Thorn • Remote

Jan 2026 – July 2026

- Partnered with product managers, data scientists, and engineers to integrate ML model improvements into production systems supporting child safety workflows
- Improved reliability of a production classification service by resolving OOM issues, reducing memory usage by **61%** and eliminating memory leaks
- Worked across distributed systems and event-driven infrastructure using Kafka, Pub/Sub, and queue-based workflows
- Redesigned CI workflows and automated resilient release processes, improving deployment confidence and reducing operational friction
- Fixed broken automation (Dependabot) and contributed upstream improvements to open-source tooling for dependency parsing and license detection

Senior Software Engineer • Capital One • Remote

Dec 2022 - Dec 2025

- Served as primary point of contact for a large-scale internal talent platform, leading engineering operations, reliability, and cross-team coordination
- Designed and launched a job-discovery platform used by employees to explore internal opportunities, combining Slack interfaces, AWS services, and asynchronous workflows
- Managed bug triage, technical debt, and on-call rotations, ensuring system stability and rapid incident response
- Mentored junior engineers and improved code quality through reviews and technical guidance
- Partnered cross-functionally with product, HR, and compliance to scope and deliver improvements to internal tools

Software Engineer (Contract) • Promptworks • Remote

Aug 2022 - Nov 2022

- Implemented Redis caching in a Django application to improve performance
- Designed and built webhook integrations for real-time customer notifications
- Collaborated directly with clients to define scope and deliver production features

Technical Mentor • Hack Reactor • Remote

Oct 2020 - Jan 2022

- Taught full-stack web development, JavaScript, React, Node.js, databases, and software engineering concepts to adult learners
- Designed and iterated on curriculum using student feedback, surveys, and classroom observations to improve learning outcomes across diverse learning styles

- Mentored students through technical projects, debugging challenges, and career transitions into software engineering

Software Engineer • The Mobility House • Austin, TX

Dec 2019 - Oct 2020

Developed Django-based applications supporting electric vehicle charging infrastructure and grid management

Research Software Engineer • RAND Corporation • Santa Monica, CA

Nov 2018 - Nov 2019

- Built a cost estimation validation platform using React and Django, working directly with researchers and clients to refine workflows and validation logic
- Developed a self-service AWS deployment platform that enabled researchers to provision cloud infrastructure without engineering assistance
- Scraped and analyzed dark web product listings using Python and Scrapy to support ongoing research initiatives
- Collaborated with multidisciplinary research teams to translate research needs into systems and internal tools

Teacher • Hack Reactor & Loyola Marymount Univ. • San Francisco and Los Angeles, CA

2015 - 2017, 2019

Taught programming courses part-time across multiple programs during this period

Software Developer • TechEmpower • El Segundo, CA

Oct 2015 - Oct 2018

- Built internal tools in Java for workflow automation and dynamic form generation
- Contributed to the Framework Benchmarks, an open-source project comparing speed of backend frameworks

Education

M.Sc. Computer Science, Georgia Institute of Technology

2017 - 2022

- 4.0 GPA with a concentration in Interactive Intelligence (now Artificial Intelligence)
- Relevant coursework: Human-Computer Interaction, Educational Technology, AI, Knowledge-Based AI, Data & Visual Analytics, AI for Robotics, Machine Learning for Trading, Software Development Process

B.A. Peace, War and Defense, UNC Chapel Hill

2010 - 2014

- Graduated with honors with minors in Computer Science and Russian Culture

Selected Projects & Research

Acquired Taste • Personal Project

2026 - Present

- Designed, built, and deployed a full-stack handbag discovery platform using Next.js, FastAPI, PostgreSQL, and Docker
- Built advanced search and filtering around detailed product attributes to help users discover products traditional retail sites don't expose
- Instrumented analytics and conducted direct outreach with independent designers to gather feedback and iterate on the product

Recursion Immersion • Georgia Tech Educational Technology

Jan - May 2021

- Designed and evaluated an educational intervention for teaching recursion using immersive learning techniques; created software prototypes, instructional materials, tutorial videos, and assessment activities
- Explored how interaction design and instructional sequencing affect conceptual understanding of difficult programming concepts

Human-Computer Interaction Research Projects • Georgia Tech HCI

Jan - May 2021

- Conducted user interviews and usability studies to identify pain points in an existing consumer product
- Synthesized findings into a redesigned experience while balancing usability, learnability, and user expectations
